Starting on the left side of a program window, you see the panels that appear as you add various layers. The layers, in turn, are organized in two ways. You see the layers and their combined effects in a view like the one shown in Figure 1-1. This figure shows the Layers panel on the left side of the screen. Figure 1-1: View a document from the Layers panel. Not all Photoshop documents are the same, so it's useful to know what's in a Photoshop document. Here are the elements of an empty Photoshop document: * **Layer Layers:** The document can have many layers, and the layers affect the composition of the document. When you create layers, you can add them to the document in various ways. For example, you can use layer masks to create gradient fills and alpha channels for semi-transparent drawing. * **Layer Masks:** The layers can be modified by using _layer masks_ as a way of selectively applying, removing, or changing portions of an image. With layer masks, you change the way a layer looks by hiding parts of an image you want to change and adding your own parts. The contents of a layer mask are also visible in the Layers panel. For example, in Figure 1-1, the mask for the Background layer is seen as a dotted fill at the bottom of the Layers panel.
