Photoshop is likely the most advanced of the image editing software currently available. Photoshop, like many commercial programs, is likely to be the best choice if you need extensive image editing capabilities. Photoshop has an encyclopedic knowledge of how to manipulate digital images, and it's easy to learn if you want to dabble in image editing. Photoshop has a rich feature set, and the software can be expensive. Krita is a free and open-source alternative to Adobe Photoshop. Krita has a strong focus on speed and ease of use, and it has a built-in program for creating GIFs, a feature that has come to define modern day memes. A beginner can jump into Krita and begin to create digital images quickly and easily, but advanced users with years of Photoshop experience will find a number of very significant differences. If speed and ease of use are your focus, Krita is a strong option. Both Photoshop and Krita are cross-platform, meaning that once you have them installed, you can edit images on computers, smartphones and on the web. The included software is free, but you will need to pay a fee to download extensions like brushes, textures, and filters. The biggest downside to Photoshop and Krita is that both currently only work on macOS. Windows users have the option of using GIMP, which is an open source, cross-platform alternative to Photoshop. This comparison compares Photoshop and Krita head to head. Outdoor furniture is commonly used in outdoor settings for entertaining or relaxation purposes. Recent styles of outdoor furniture include outdoor coffee tables that are supported on pedestals, such as, for example, U.S. Pat. No. 5,529,335. Many outdoor furniture items are made of metal that rusts or oxidizes when exposed to the outdoors. In order to prevent the rusting of outdoor furniture, many outdoor furniture items are coated with a protective coating. Outdoor furniture, such as outdoor coffee tables, is commonly shipped to the retail location in a disassembled condition for ease of storage and transportation. The pedestals of outdoor coffee tables are typically formed of stamped sheet metal. Because some pedestals are quite small, the number of components is reduced by using connectors to bind pedestals to one another. For instance, if pedestals are set out in the same line, the connectors are used to join the pedestals in an alternating pattern. The connector typically takes the form of a metal rod that extends through a hole in a pedestal and joins two pedestals together. Because the pedestals are quite small, a small connector is used to join them. For example, the connector can be about an inch long. Because connectors are small, they can be easily lost in the cushions of outdoor furniture. If a connector is lost, a piece of furniture can have a less than seamless appearance. If, for example, a connector is mistakenly placed in the cushions of an outdoor table, the cushions of the table will appear to have a curved edge. Furthermore, connectors are easily broken when they are moved, such as, for example, when a server is placed on the table. Furthermore, small connectors can be difficult to find when the connectors are needed to construct the furniture or repair the furniture. If, for example, the connectors are misplaced, the furniture may have to be returned to the manufacturer, who may have to perform the repair.⁶
