Of course, a lot of the new features in Photoshop fit into the new versions of other popular image editing programs like Lightroom and Aperture, but Photoshop still has a strong edge when it comes to its better editing options and the extensive GPU (Graphics Processing Unit) filtering system for photo retouching. The new Feature panel should make it easier to find and manage the tools you use most often, and it now has a "Filter" menu with a range of tools for tweaking and improving photographs. Other new tools include Adobe's new "Focus Features" tool, which helps detect the focus points in a scene and lowers the noise in gradient images. On the right side of the image window, the new Curves tool offers a good array of adjustment tools to work with photographs. The Grid tool is now fully integrated with the Layers panel. Grid tools are used to align and create uniform layouts. You can use the Grid tool to literally create a one-to-one match or to adjust each gridline by moving its grasp to make it solid, dotted, dashed, or double-dotted.
