I feel like the iPad Pro gets the best out of me with the new app, but I just wish the panels were more hidden and I could reach the tools more quickly. The truth is, we have a tough job here at Adobe. Photoshop is an incredible app that is likely going to be around longer than our existence. We have a lot of customers who never really worked with the app, but use it day in and day out. We try to do what we can to make the features fit into modern workflows. Whether it's Lightroom or Photoshop, the truth is a lot of us are going to outlive the app we work in. And as you probably know, the same holds true for the company. Like Adobe, sometimes it's not the features that make or break the product, but the product that makes or breaks the features. If you work in the graphic arts, you already have a lot of familiarity with Photoshop onscreen. It may not be something you use on a day-to-day basis, but you might be using it when you first take a picture, or when you're making a graphic design. Photoshop has all the essential functions you need to edit your work, and more. >Adobe Photoshop CC for iPad, Photoshop for iPad, Photoshop Creative Cloud, or Photoshop for iPad Pro are great apps for creative artists and designers, yet the iPad Pro model is where I began and I chose Photoshop CC because it was that much more convenient on the iPad Pro. Because of the iPad Pro's full sized multitouch interface, it feels natural to work in Adobe Photoshop CC on the iPad Pro. You can take advantage of all the features Photoshop CC provides.
