Smart Objects are objects that are edited typically in a fashion similar to layers. Smart Objects maintain properties like transparency, colors and effects beside their regular image properties like sizes, positions, and rotation angles. There are several advantages to Smart Objects over traditional layers:

- **More efficient:** Smart Objects have less memory than layers, so it is more efficient to edit them.
- **Multi-threading:** Layers processes by default, which is good for editing and rendering. However, Smart Objects allow editing to go on concurrently, which is good for performance.
- **Works with all elements:** Layers give you benefits and flexibility with the content editing capabilities Photoshop provides. For example, when you have an image where you want to patch two locations exactly the same, you can edit it as a single object. Layers present a challenge as you have to edit them one by one.
- **Saves effort at all times:** When you edit an object as a Smart Object, Photoshop will always keep that object as an Smart Object until you convert it back to a regular layer. This is very helpful when you want to edit an object with artist tools that don't work with layers.

Photoshop's ability to create interactive graphics was also preserved. You can now pull your web content into your Photoshop document and apply layers of Photoshop graphics to bring your web graphics to life in your own document. With a custom web browser, you can interact directly with your web content in a Photoshop document and bring your page to life with your own artwork.
