1. Sunbelt Personal Firewall is a firewall that protects your Windows PC from harmful programs and viruses.
2. Sunbelt Personal Firewall provides you with Internet security, Windows and PC protection, and helps to keep your privacy safe.
3. Protect your computer from unauthorized access.
4. Sunbelt Personal Firewall also prevents your computer from unauthorized access.
5. Sunbelt Personal Firewall includes Internet security, Windows and PC protection, and helps to keep your privacy safe.
6. Sunbelt Personal Firewall provides you with Internet security, Windows and PC protection, and helps to keep your privacy safe.

Sunbelt Personal Firewall is a firewall that controls what you can and cannot do with your computer on the

Internet or in your local network. It protects computers from harmful programs that can steal personal information, viruses, and other malicious software. The most important advantage of the Sunbelt Personal Firewall is that it can be easily installed on all major Windows versions. **WARNING:** If you uninstall the app, you will lose all configuration settings and cannot restore them. Uninstallation removes all configuration information and cannot be undone. Sunbelt Personal Firewall contains no spyware, adware, or any other kind of software that will track your behavior and send you unwanted messages. You should use this product in combination with Windows Firewall, not with a different anti-spyware product. If you decide to uninstall the Sunbelt Personal Firewall, please contact your local support department for help in restoring

## **Sunbelt Personal Firewall Free**

KEYMACRO is a very simple application which provides you with the ability to keystroke data into a spreadsheet. If you have a mouse attached to your computer, you can also use KEYMACRO to create macros. A keystroke is an instruction to your computer. When it is issued, a keystroke is a set of predefined instructions to the computer that allow you to interact with the computer or perform some function. You can use the keyboard to:

- keystroke data to a spreadsheet.
- open the Internet or a web page.
- open a specific folder.
- add data to a spreadsheet.
- open an application.
- open a file.
- open a folder.
- add data to a spreadsheet.
- close a file.
- close an application.
- print a document.
- add data to a spreadsheet.
- delete data from a spreadsheet.
- save a spreadsheet.

KEYMACRO is designed to make working with spreadsheets and data more enjoyable. It is useful to the beginner and the expert alike. KEYMACRO is a freeware application that can be downloaded and installed in minutes. **Keyboard Shortcuts:** To record a macro, press and hold the ALT key, then press one of the above numbers. After holding the ALT key for several seconds, the keyboard will produce a specified string of characters. Press the SPACEBAR key to create the macro. You can program the macro to do anything, including accessing a web site, opening a file, saving a file, displaying a screen, running an application, saving a document, and more. Once you have entered the macro, you can edit it to add extra actions or

make changes. Just use the ALT key to select the changes you want to make, and press the TAB key to make them. You can see and edit the macros you create, and you can easily run them. Just press the ALT key, then click on the Macro icon on the right side of the screen. QuickStart Guide for KEYMACRO: 1. Open KEYMACRO 2. Click on the File menu, select New Macro. 3. Select the number key you wish to use to trigger the macro. Use the number keys 1-0-4-8-2-9. 4. Click Next to start recording the macro. 5. Type the text you want to perform in the first field. Click OK to start

## What's New in the Sunbelt Personal Firewall?

This is a free version of the SPF firewall. This software is restricted to home use and will expire after 30 days. The default installation location is C:\Program Files\SPF. Internet access is disabled by default. The default configuration will cause the SPF firewall to prevent the computer from accessing the internet. Once the Internet service is enabled, the SPF firewall will be reconfigured to allow the computer to access the internet. To reconfigure the Internet service for the SPF firewall, right-click the Start button and click Run. In the Open box, type regedit, and then click OK. The following registry entry will be located under

HKEY\_LOCAL\_MACHINE\Software\Microsoft\Windows\CurrentVersion\Internet Settings.

[HKEY\_LOCAL\_MACHINE\Software\Microsoft\Windows\CurrentVersion\Internet Settings\{4D36E965-E325-11CE-BFC1-08002BE10318}\Proxy Type:REG\_SZ

ValueData:[public:media:0101000006e95812463065782f4c204131312e706e67] Remove the “[public:media:” characters and change “0101000006e95812463065782f4c204131312e706e67” to the NetBIOS name of the computer. You may also be asked to open the services.msc administrative tool.

[HKEY\_LOCAL\_MACHINE\Software\Microsoft\Windows\CurrentVersion\Internet Settings\{4D36E965-E325-11CE-BFC1-08002BE10318}\Proxy Type:REG\_DWORD ValueData:1

DefaultValue:1 If you are not the Administrator user, you will also be asked to confirm the following registry changes.

[HKEY\_CURRENT\_USER\Software\Microsoft\Windows\CurrentVersion\Internet Settings\{4D36E965-E325-11CE-BFC1-08002BE10318}\Proxy Type:REG\_DWORD
