

Gorilla Easy Signage

* The software enables you to run two independent screens with different video, audio, images, and even other software applications in a multi-zoned layout. * You can adjust the video and audio contents on each screen. * The software enables you to display full screen marquee text and images, as well as video and audio. * You can add Windows Desktop photos or Graphics to your own design. * The software enables you to write and display full screen dynamic text messages. * The software enables you to preview all your changes before you save the layout. * Gorilla Easy Signage will work with both Windows and Mac platforms. * Gorilla Easy Signage has a special support for Quicktime and MPEG4 Watch this video to learn more about Gorilla Easy Signage: License Gorilla Easy Signage is Copyright 2005 and is distributed under a limited license that allows non-commercial use. Commercial users are allowed to modify the software at no cost but must comply with all trademark and intellectual property laws and may not use the software for anything other than what Gorilla Easy Signage was designed for. Gorilla Easy Signage does not allow modification of the software in any way that may damage Gorilla Easy Signage, its source code, trademarks, or other intellectual property of Gorilla. In order to use Gorilla Easy Signage, you need to read the Easy Signage License and agree to the terms. Summary Fantastic piece of software, but what it lacks is a windows driver. As it stands, you can only install it on a mac (using a different one isn't an option) and it doesn't appear to have any option to run programs or play sound from your computer. Not good! I was quite disappointed when I downloaded this software and tried to install it on Windows. I get an error message stating that this software is incompatible with my system. What's more, I tried to find a suitable driver to download, but nothing comes up. I can't even use the software on the system of another computer, because it won't install. The lack of drivers will render the software useless for me, but I do not understand why this program has to make its compatibility dependent upon the OS being used. Having said that, I do understand that this software is for Mac users only
