After a few years of sketches, employees at Adobe came up with a Photoshop CC CS6 update, and everything was finally looking promising for this product. With new UI, a brand new technology for editing RAW files, and some new camera RAW format support, the release looked like some of the best work done for this version. Adobe would be wise to recall that its customers do not all use the same graphic standards that professional brands use. Leagues such as the D&A, AIGA, RUG, OMG, ICSO worldwide use a few hundred standardized values to describe specific design elements. Unfortunately, Lightroom does not make use of such standards. Given these facts, it was rather surprising to find many of these design elements, or, at least, their appropriate names, appear in Lightroom. Having said that, the utility of some of these goodies is rather limited and doubtful, as many of them are more suited for illustration tools and sketching. For example, I love the Scribble tool and the thin strokes and blines sorts of drawing tools, but the Brush tool is somewhat better fit to the Adobe line. So OpenType fonts, which are used across many creative industries for various purposes, is something that Lightroom does not support out of the box. This would be a real blemish on the most powerful photo manager and editing software in the world. Another interesting thing about the iPad Pro is the fact that it is trivial to use two apps simultaneously. When Adobe was first unveiling the iPad Pro, Adobe Photoshop Sketch looked rather chaotic and the app only arrived a few weeks ago . However, the app now feels like a real artistic tool. It even has a familiar feel to it, with the several tabs in the top left conveniently grouping related tools. I did find it a bit confusing at first, though, because the leftmost tab appears only when you enable the new tool called the Layer Palette.

Greene (toolbox) A greene is a toolbox made of wood or canvas, with a hinged top for storing tools. A greene is similar to nineteenth-century wood or wooden and tin toolboxes, which in turn were based on the prehistoric box-and-mortar, which had a hole in it, the 'Greene' (probably a corruption of 'green manhole cover') and which has been found throughout the ancient world. Description The invention of the greene has been attributed to eighteenth-century cabinet-makers and toolmakers, though its existence in the eighteenth century was accepted only recently.
