The changes that Lightroom will implement from Lightroom 4 to Lightroom 5 is that one can now import XMP metadata and can use the Shared Links feature (although not as a replacement for Lightroom's version 4's Shared Links). At this time, it's not clear to me how these will improve my workflow, but perhaps it would enable more images to be shared with others. Also, Lightroom is about to start allowing you to swap the order of image previews and sorting order, which was already present in the previous version. Want to share your images with a relatively large set of people? By default, the Share Lightroom feature lets you share just one image at a time, but if you check the box in the options menu, you can share multiple images in a series at the same time. Then, as each person gains access to the shared Workflow Window, the user can select which images to view. This can be a good way to let a group view images for a particular project or similar. Does anyone have a good solution for two-sided printing? I want to print out receipts and return labels for all the extra copies of my backups. I bought a two-sided laser printer, and the process went fine for the first few weeks. Subsequently, I printed a couple of important documents (like contract reviews), that I could tell were going to bleed, the ink was just bleeding off the paper. I had to get busy cleaning it up with hand cleaners. I trusted the paper to be totally absorbent and re-ink the paper correctly. I realize it's mostly just a commercial problem, but I'd think at some point it would be better to go to the trouble of finding out what worked best for your printer model.

The next step is to export your work and get it online. The other great thing you can do is upload into Photoshop CC . You can even get a link that you can share with anyone and your colors will be imported into any project you are working on. You know that you can always share it through the 'Share' button on the top-right corner. The next thing you can do is push your work or your project into an Adobe Creative Cloud Design Center . When you add it there, it will automatically get converted into a PSD file . You get all the latest updates when you are editing as well as when a new version is out. You can share a link with anyone and they can view it right away. **What It Does:** The Lens Blur filter produces a subtle, yet beautiful, blur effect. Perfect for blurring out the edges of text and objects in your images, this is a must-have filter. The photograph editing programs you need for your photo editing tasks are Photoshop and Lightroom. These are two different things. To be honest, Photoshop is a complex, powerful photo editing program, in fact, it's probably the most widely used. The Photoshop Elements program is designed to be easy and simple to run, but still offers enough level to run your basic tasks such as copying and pasting and red-eye removal. If you decide to purchase the software, the download is approximately 600MB. However, you can

also test out the application for free before downloading in order to see what the software has to offer before it comes down to a final purchase.

We do it all the time, and it's easy – just open up a document, start writing, or start putting out your Nuvie script on your MacBook. We love telling stories. We love telling our stories. But this is 2018 and we are not going to write our novel in the traditional way. Instead, we're going to have a few fun projects in mind. One of we're going to write is this ? We're going to record a podcast, including this installment of Creative Writing Masters, delivered to you straight from our couch.
