That's not to say that the iPad Pro isn't a better platform for photo editing. It's capable of much more than simple photo editing tasks. But with the inexpensive iPad Pro, you can shoot and edit your images with ease. The best part is that the tablet doesn't take up much room in your camera bag when you're on the go and don't need a large investment of space. Cyber security is different than cybercrime. The two are not directly related. Cyber security focuses on preventing data loss and damage to computers and networks while cybercrime focuses on illegal activities such as theft, fraud, and damage to equipment. Cybercrime is always evolving, and it is becoming more and more sophisticated every day. The Internet has enabled criminals to embed malicious software or malware into websites, spoof bank websites, and surreptitiously attack the computer systems and data being stored in the cloud. The new Internet of Things, or IoT, is where we are at the moment, and the Internet of Things and smartphones will soon become the next big thing in cyber security management. Another awesome part of the experience of using Photoshop on the iPad (despite being one of many limitations) is the ability to use the Apple Pencil. It can be a huge timesaver when using the iPad to edit projects. It feels like old school. The one thing that sucks about the Apple Pencil is that it is not an eraser. The iPad Pro uses a similar mechanism as an eraser on a pencil drawing. But rather than using it as an eraser, it alters the colors, making selective erasing easier. This is also why the Apple Pencil is a bit more expensive than the manual eraser, protecting its channel.
