The new Suggest panel is another decent addition, as it provides design elements (when you select such an element). It's not a totally new panel because it includes features that used to exist in the old Edge Panel. In fact, the old Edge Panel is still there, though not usable. You can choose the old Edge Panel and you'll get the new Affect panel. So, it's a shame that there is no new and revamped Edge Panel by default. Also, the new Panorama panel is probably the most useful panel Adobe has included by default. It works in a different way than the old panel, though. It still works as an additional Panorama panel and it works as a new full-screen panel. You can use both Panorama panels, but if you want to use the new Panorama panel, you must add the Panorama panel (Pop-up Window item) to the new panel. The pop-up window menu does not include any options to control the panel and its appearance. It can't be moved to the main or right-hand side panel either. The best option with the new Panorama panel is to control it in the standard way by editing its settings in the Camera Raw window. That includes adjusting its extent, and changing its blending mode, but size and position are still under control. One other, lesser used, panel that I wish was included was the White Balance panel. Lightroom is a colour workstation, and almost always you'll want to fine-tune the white balance. The new Color panel is great, but it doesn't control white balance. Too often I've edited a photo and saved it, only to realise that the white balance did not improve. I was stressed that the forms of Photoshop do control white balance and they should have catered towards amateur photographers in their latest release. An ideal solution would be to allow Lightroom 5 users to easily control white balance via a user-friendly interface.

The outlook of the shape layers in Photoshop may be limited, but the capabilities of the feature go a step further than what we assume about it. In the traditional marquee selection tools, the selection is limited to the raster process, and in many cases, the output will result in the sharp pixilated edges, which are never good looking. But the shape layers can act as an individual object within the document with its attribute to maintain the finest quality. e3d0a04c9c
