It allows the user to push down on the control itself to create a different look. This feature is a major departure from the well-used exposure controls found in other graphics editors, where adjusting a slider is like adjusting the look of your image with paint instead of using a filter. It's a dramatic shift made possible through the best user experience Adobe has to offer. For those in Creative Cloud Libraries, Adobe XD currently supports the creation of vector graphics, and is being designed to support the creation of all types of graphic content. For those who use or have used Photoshop, you will see Adobe XD as a familiar and easy to use experience with a similar feel to desktop Photoshop while taking advantage of the same native full-featured video editing capabilities. We've also made some changes around our workflows to streamline the process of getting an image into Photoshop. We've built a new workflow from day one that starts with an intelligent photo development application where we give you all the tools you need to enhance your images.
