When working on my Mac pro, I just update once a week instead of waiting for a next major version but I do go back to the Firestick version and use that to do backups to my Amazon kindle (sometimes to upload to backblaze). I also like the fact it's a Mac program and feels a bit faster than the Mac and PC versions. I like some other things also about that Firestick version including the added Dropbox which is crucial to me because I don't have to rely on the service and it's affordable for one-time use on something between $5 and $10. (Price varies by country and has to be redeemed at Amazon.com. A 20 GB personal/family plan can be seen here for $119.99) The trial and full version is available now. High praise for this powerful tool for photo and video professionals. A total overhaul of some of the most powerful tools, such as the ability to import, edit, preview and even finish your next project. Since I purchased the iPhone 7 Plus, I have used it almost every time for sketching, capturing reference images and taking photos, especially with the PS App. Plus I use the paid copy of Photoshop CC (2019), which I highly recommend. I can see the potential for this tool with a dedicated iPad for high-end designers and a tablet for retail/marketers that wants to carry a top-notch image-based CMS to magazine and merchandise retailers. With the launch of Photoshop CC 2019, Apple has joined the Photoshop Elite club along with Silver, Gold and Platinum tiers. With the launch of Photoshop Elements 20, Adobe is aiming the program at the Family audience. Both are excellent, powerful apps that have been improved and updated for the iPad and iPhone platforms.
