You can certainly save extra money with on-the-fly image editing, but you also won't be able to do the same share editing that you can in Lightroom. Well, what else can you do to really save money? Use it even more? You will pay about \$3400 for the aforementioned tier status of Photoshop CC too. That's between \$50 and \$40 extra every year. Not everyone needs advanced features, but a student with a library of 100 images may need them. On the other hand, you won't need to worry about the editing software. I use the BPP-Crop, Vignette and Blur tools quite often. But if you do not use them regularly, I suggest to enable Autofocus Smart Mode and the Lens Correction option in the menu. They have both improved quite a lot since version 4.5. I like to use the Curves tool quite a lot. The old LUT versions were not very usable in my opinion, because they look too harsh. For example, they tend to remove the green/blue tones in the shadow areas. Some things that were missing on the previous version appeared on this new one. The classic view on the left? It is back, just switch to it through the drop-down right right of the view option. And there is also a vertical view option! Lightroom, Photoshop and the other Adobe Creative Cloud apps are optimized for desktop and laptop computers. Let's be honest, Photoshop and Lightroom are slow on the iPad due to the limited resources that cannot take full advantage of the capabilities of iPad Pro. We are talking about it, so let's get it off of our chests. By releasing only iPad Pro-optimized apps for the Creative Cloud, Adobe is falling short of the vision of what the cloud should be. I do not believe that Lightroom should be the only offering that takes advantage of the iPad Pro features. As a matter of fact, the idea was that the hardware would help photogs to work with larger images. Right now, iPad Pro just provides a bigger canvas (or screen area). Apple has already provided iPad Pro with gigabytes of RAM, so why is Adobe still pushing out compromises, especially when they are unlikely to get any more physical resources? In the future, will the computer industry continue to depend on compromises by dint of limitations of processor speeds, memory, and other product functionalities? How will the cloud, a moving construct, be able to evolve and sustain itself with such limitations? Why is the camera industry taking a different route than the computer industry?

Adobe Photoshop CC Lightroom let's you celebrate the imagery and create a unique workflow. Lightroom "attributes" certain areas of the image that you can adjust later on with a number of different tools, like adjusting for contrast and brightness. Use Lightroom for cataloging, metadata, or even creating desktop wallpapers. Maybe you're a Photoshop user but not a Lightroom user. In that case, Lightroom is an ideal companion for Photoshop. When you're ready to convert your favorite photos from that antiquated format that's known as JPEG into Lightroom's "native" format, you can use the Lightroom Editor to go through the metadata and select the information you want to keep and move on to the next step. In Photoshop, you can also fix a handful of issues such as removing red eye, smoothing out blemishes, and straightening images. And, with Photoshop's new "Style" feature, it's easy to create and apply specific styles to your photos. Be sure to also look into the Photoshop Keyboard shortcuts. Many Photoshop's shortcuts will be familiar to you, but there are some new tricks that you could be using in your workflow. A good keyboard short cut that I use often is the Magnify tool to zoom in on an image if you need to. Another technology that Photoshop's got going for it is the "Touch Up" brush, which lets you quickly make small adjustments to an image to fix things that need fixing. And, you can even apply to multiple images at once in Photoshop. **What it does:** The best-selling photo-editing software, and as such one of Lightroom's signature features, the Photoshop CC update includes one of Lightroom's signature features, Photoshop's Camera Raw.
